

Connect ChatGPT to Vacei Books

Before you begin

Have a verified Vacei account and at least one company. Use ChatGPT on the web with an account/workspace that permits developer-mode connections. Workspace policies may require an administrator.

Connect

1. In ChatGPT, open **Settings > Security and login** and enable **Developer mode**.
2. Open **ChatGPT Plugins**, select the plus button, and create a developer-mode app named **Vacei Books**.
3. Use this public MCP server address, including **/mcp**:
<https://mcp.books.vacei.com/mcp>
4. Choose OAuth authentication and the dynamic client registration option when offered. Sign in on the Vacei authorization page. Do not enter a made-up client secret.
5. Review the discovered tools. In a new conversation, select Developer mode from the plus/tools menu and enable Vacei Books.

Using your connection

Choose the right company

Sign in with your own Vacei account. Select only the companies you want this connection to access, then review its permissions. One owner can manage several companies; each company keeps separate records.

Read allows viewing records. Upload stores evidence. Draft allows preparing records. Manual-write permissions allow supported bookkeeping actions with the existing confirmation checks. Grant only what you need.

A company added later may need a new connection approval. Reconnect and select it if it is missing. Do not give the AI your password, verification code or a secret token in chat.

Check the connection

Start with: **"Use Vacei Books to list my companies. Show the name, currency and current accounting period for the company I select. Do not change any records."**

Check that the reply names the intended company. Before any posting, review the source amounts, accounts, dates and action summary. A draft or uploaded file is not a posted journal.

Everyday use

Ask for unpaid invoices, account balances or the trial balance. For a document, ask the AI to read the actual attachment, identify uncertainties, and show a draft before recording it. Vacei checks the submitted figures and keeps the accounting record; your AI does the document reading.

Your AI subscription is separate from Vacei. Self-serve does not enable Vacei assisted bookkeeping workers. Use the opening-balances guide when moving existing books.

If a step is missing

Check your account eligibility and workspace policy. Refresh the app tools after Vacei releases new capabilities. For an expired connection, reconnect normally. If the tool reports missing company permission, reconnect and select that company.

Official setup reference

Menu names can change. Checked on 9 September 2026: [OpenAI: ChatGPT developer mode](#).
